OPPORTUNITIES

Opportunity **Estimated Savings**

Eliminate render-blocking resources

0.64s ^

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. Learn how to eliminate render-blocking resources. FCP [LCP]

✓ Show 3rd-party resources (2)

URL	Transfer Size	Potential Savings
css/all.min.css (cdnjs.cloudflare.com)	10.5 KiB	760 ms
css/materialize.min.css (cdnjs.cloudflare.com)	17.5 KiB	150 ms
css/style.css (vazy-garden.herokuapp.com)	2.0 KiB	170 ms

Reduce unused JavaScript

0.30s ^

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. Learn how to reduce unused JavaScript. [LCP]

URL	Transfer Size	Potential Savings
js/materialize.min.js (cdnjs.cloudflare.com)	36.5 KiB	29.3 KiB
/jquery-3.5.1.min.js (code.jquery.com)	30.4 KiB	21.8 KiB

Reduce unused CSS 0.15s ^ Reduce unused rules from stylesheets and defer CSS not used for above-the-fold content to decrease bytes consumed by network activity. Learn how to reduce unused CSS. FCP (LCP)

URL	Transfer Size	Potential Savings
css/materialize.min.css (cdnjs.cloudflare.com)	17.5 KiB	16.3 KiB
css/all.min.css (cdnjs.cloudflare.com)	10.5 KiB	10.4 KiB

These suggestions can help your page load faster. They don't directly affect the Performance score.

DIAGNOSTICS

materialize.min.js:6

▲ Does not use passive listeners to improve scrolling performance

Consider marking your touch and wheel event listeners as passive to improve your page's scroll performance. <u>Learn more about adopting passive event listeners</u>.

materialize.min.js:6
materialize.min.js:6

▲ Page prevented back/forward cache restoration — 1 failure reason

Many navigations are performed by going back to a previous page, or forwards again. The back/forward cache (bfcache) can speed up these return navigations. <u>Learn more about the bfcache</u>

Failure reason	Failure type
Back/forward cache is disabled by flags. Visit chrome://flags/#back-forward-cache to enable it locally on this device.	Not actionable
/login (vazy-garden.herokuapp.com)	

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. Learn how to avoid chaining critical requests. FCP LCP

Maximum critical path latency: 326.202 ms

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

NAMES AND LABELS

	Failing Elements	
	se are opportunities to improve the semantics of the controls in your application. This may enhance the experience for use stive technology, like a screen reader.	ers of
ADD	DITIONAL ITEMS TO MANUALLY CHECK (10)	Hide
0	The page has a logical tab order	^
1	Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. <u>Learn more about logical tab ordering</u> .	
0	Interactive controls are keyboard focusable	^
1	Custom interactive controls are keyboard focusable and display a focus indicator. <u>Learn how to make custom controls</u> <u>focusable</u> .	
0	Interactive elements indicate their purpose and state	^
1	Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. Learn how to decorate interactive elements with affordance hints.	
0	The user's focus is directed to new content added to the page	^
1	If new content, such as a dialog, is added to the page, the user's focus is directed to it. Learn how to direct focus to new content.	
0	User focus is not accidentally trapped in a region	^
	A user can tab into and out of any control or region without accidentally trapping their focus. Learn how to avoid focus tra	<u>ps</u> .
0	Custom controls have associated labels	^
1	Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. <u>Learn more about custom</u> controls and labels.	
0	Custom controls have ARIA roles	^

Custom interactive controls have appropriate ARIA roles. <u>Learn how to add roles to custom controls</u> .
O Visual order on the page follows DOM order
DOM order matches the visual order, improving navigation for assistive technology. <u>Learn more about DOM and visual ordering.</u>
O Offscreen content is hidden from assistive technology
Offscreen content is hidden with display: none or aria-hidden=true. Learn how to properly hide offscreen content.
O HTML5 landmark elements are used to improve navigation
Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. <u>Learn more about landmark elements</u>.</nav></main>
These items address areas which an automated testing tool cannot cover. Learn more in our guide on conducting an accessibility eview.
PASSED AUDITS (12)
[aria-hidden="true"] is not present on the document <body></body>
Assistive technologies, like screen readers, work inconsistently when aria-hidden="true" is set on the document <body>. <u>Learn how aria-hidden affects the document body</u>.</body>
Buttons have an accessible name
When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. <u>Learn how to make buttons more accessible</u> .
ARIA IDs are unique
The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. <u>Learn</u> how to fix duplicate ARIA IDs.

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. <u>Learn more about</u>

form element labels.

[user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5. Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more about the viewport meta tag. Background and foreground colors have a sufficient contrast ratio Low-contrast text is difficult or impossible for many users to read. Learn how to provide sufficient color contrast. Document has a <title> element The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more about document titles. <html> element has a [lang] attribute If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. Learn more about the lang attribute. <html> element has a valid value for its [lang] attribute Specifying a valid BCP 47 language helps screen readers announce text properly. Learn how to use the lang attribute. Lists contain only elements and script supporting elements (<script> and <template>). Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. Learn more about proper list structure. List items (<1i>) are contained within , or <menu> parent elements Screen readers require list items () to be contained within a parent , or <menu> to be announced properly. Learn more about proper list structure. Heading elements appear in a sequentially-descending order Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. Learn more about heading order.

NOT APPLICABLE (31) Hide

O [accesskey] values are unique	
Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more about access keys.	1
O [aria-*] attributes match their roles	
Each ARIA role supports a specific subset of aria-* attributes. Mismatching these invalidates the aria-* attributes. Learn how to match ARIA attributes to their roles.	1
O button, link, and menuitem elements have accessible names	
When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn how to make command elements more accessible</u> .	
O [aria-hidden="true"] elements do not contain focusable descendents	
Focusable descendents within an [aria-hidden="true"] element prevent those interactive elements from being available to users of assistive technologies like screen readers. Learn how aria-hidden affects focusable elements.	÷
ARIA input fields have accessible names	
O ARIA input fields have accessible names When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more about input field labels.
